## Maintenance & Cautions

Cycle service
※ Avoid battery over discharge, especially battery series connection use.
※ Charged with recommend voltage, ensure battery can be full recharged.
In general, recharge capacity should be 1.1-1.15 times discharge capacity.
※ Effect of temperature on cycle charge voltage: -4mV/°C/Cell.
※ There are a number of factors that will affect the length of cyclic service.
The most significant are depth of discharge, ambient temperature, discharge rate, and the manner in which the battery is recharged.
Generally speaking, the most important factors is depth of discharge.

The diagram shows a rectangular building footprint with dimensions 49.58 ft (width) and 32.68 ft (height). Inside the rectangle, there are four concentric elliptical paths. Each path is defined by a series of points with numerical values. The outermost path has values of 0.46. The next path inward has values of 0.93. The third path has values of 1.39. The innermost path has values of 1.86. The values increase as the paths move inward, suggesting a gradient or elevation change across the building area.
