Aspiration hazard:

No effects known.

Subacute to chronic toxicity:

Inorganic silicon compounds may be acute inhalation irritants. Prolonged inhalation may cause pulmonary fibrosis known as silicosis.

Nickel and nickel compounds may cause a form of dermatitis known as nickel itch. They may also cause intestinal disorders, convulsions and asphyxia. Airborne nickel contaminated dusts are

as carcinogenic to the respiratory tract.

Subacute to chronic toxicity:

No effects known.

regarded

Additional toxicological information:

To the best of our knowledge the acute and chronic toxicity of this substance is not fully known.

NTP-R: Reasonably anticipated to be a carcinogen: limited evidence from studies in humans or sufficient evidence from studies in experimental animals.
